SECTION E - SEWERAGE SYSTEMS

(Section E will be completed only when quantities are shown in the "Potable" column in Section C)

1. Estimated sewage quantity:

158 Gal/day

(Use 1 gal/day/space for the number of shelter spaces shown in Item B-1.
Note: This figure is assumed for the purposes of this survey only, and includes an allowance for flushing).

2. Estimated capacity of sewer main(s) from building:

571,000 Gal/day

(Include existing sanitary, storm and/or other sewer mains which operate by gravity flow, only. Do not include flow from a sewage lift station in building unless stand-by power is available for its operation).

3. Water closets available to shelters:

225 Units

(Include all water closets within or accessible to the shelter areas in the building without direct exposure of personnel to radiation).

4. Estimated modification costs:

\$ 0

(Modifications will be considered only when entry in Item 2 is less than Item 1, above; or when shelter area(s) have no access to a gravity sewer or storm drain without direct exposure of personnel to radiation. Include modifications, such as the addition of a "wye" or "tee" for access into the line. Do not include items such as major extensions to or re-routing of existing lines, or addition of pumps or power for pumping. Cost estimates are for planning purposes, only and will be based upon the best on-site information readily available. If desired, a simple sketch may be attached).

Remarks: (Include brief description of proposed modifications and statement as to remaining deficiency, if any, to meet requirement in Item 1, above).
